PROJECT THEME
Smart and Secure Technology for Modern School Attendance

A. Project Title
Secure ID Scan Attendance and Facial Recognition System (SISAFRS)

Group members
ASUNCION, CARL ANGELO E.
Abancio, Nicolas Rosebelle DG.
Espiritu Jewel D.
Morales Niña B.
AGUILAR, CRYSTAL MAE B.
ABERGAS, CRIS JHILIANE S.

Problem Statements
Schools may experience several problems in managing student attendance, particularly with manual attendance recording, attendance fraud, and unauthorized access to attendance information. Manual checking can take a significant amount of class time and may result in missing, duplicate, or inaccurate records. Attendance fraud can also occur when students mark attendance for absent classmates or use another student's information. In addition, unauthorized users may access or modify attendance records, which can compromise the accuracy, security, and privacy of student information.

Proposed Solution
SISASFR is proposed to address these problems by using student ID scanning and facial recognition to verify a student's identity before recording attendance. The system automatically records the student's name, date, time, and attendance status after successful verification. It also includes secure login, role-based access control, and audit logs to prevent unauthorized access and track important system activities. Through these features, SISASFR aims to provide a faster, more accurate, reliable, and secure attendance management system for students, teachers, and school administrators.

Main Features
1. Student Management
The system allows authorized personnel to manage student information in a centralized database. This makes student records easier to organize, update, and retrieve when needed.

2. ID Scanning:
The system allows students to scan their school ID or QR code to identify their registered student account. This provides the first step in verifying the student's identity before attendance is recorded.

3. Facial Recognition:
The system uses facial recognition to verify whether the person scanning the ID is the actual registered student. This helps prevent students from using another student's ID to record attendance.

4. Automated Attendance Recording:
The system automatically records the student's attendance after successful ID and facial verification. It records important information such as the student's name, date, time, and attendance status.

5. Attendance Monitoring:
The system provides real-time attendance information, allowing teachers and administrators to monitor the number of students who are present, late, or absent.

6. Attendance Records and Reports:
The system stores attendance records electronically and provides organized reports that authorized users can view and use for monitoring and documentation.

7. Dashboard:
The dashboard provides an overview of important attendance information, including total students, present students, late students, absent students, today's attendance overview, recent activity, and system status.

8. Audit Logs:
The system records important activities and changes made within the system. This allows administrators to monitor actions such as attendance corrections, user activities, and other system transactions.

9. User Access and Security:
The system restricts access to attendance and student information to authorized users through secure login and role-based access control. This helps protect student information and prevents unauthorized users from viewing or modifying records.

10. Manual Verification:
The system provides a manual verification option when facial recognition, ID scanning, or other system components fail. This ensures that legitimate students can still have their attendance properly recorded despite technical problems.

Expected Benefits and Impact

Benefits to Teachers
The system can help teachers:

- Save time when recording and checking student attendance.
- Monitor attendance more easily through the dashboard.
- Reduce errors caused by manual attendance recording.
- Quickly identify students who are present, late, or absent.
- Access organized attendance records and reports.
- Reduce attendance fraud and proxy attendance.
- Improve the overall attendance monitoring process.

Benefits to Students
The proposed system can provide students with a faster and more convenient way of recording their attendance. Instead of waiting for the teacher to call names or manually sign an

attendance sheet, students can scan their school ID and complete facial verification. The system helps ensure that the attendance recorded belongs to the correct student and reduces the possibility of proxy attendance. It can also provide a more organized and consistent attendance experience for students.

Benefits to School Administrators

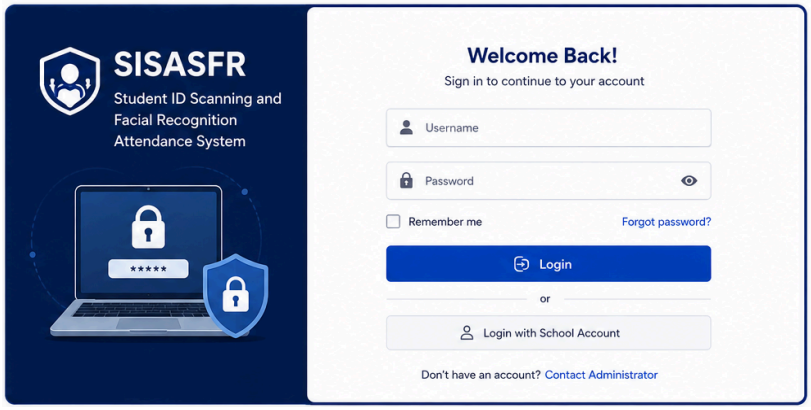

The system can help school administrators manage attendance information through a centralized system. Authorized personnel can access student attendance records, generate reports, monitor attendance activities, and manage user accounts more efficiently. The use of audit logs can also help administrators track important changes and system activities, providing better accountability and control over attendance data.

Benefits to the School

The school can benefit from having a more systematic, accurate, and secure approach to attendance management. SISASFR can reduce the need for paper-based attendance sheets and lessen the workload involved in manually encoding and organizing records. It can also help prevent attendance fraud, reduce inaccurate records, and make attendance reports easier to prepare and retrieve. Overall, the system can improve the efficiency of the school's attendance monitoring process.

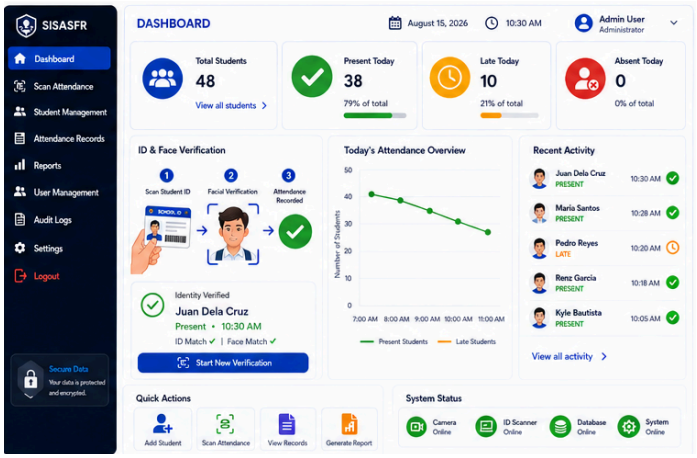

Community Impact

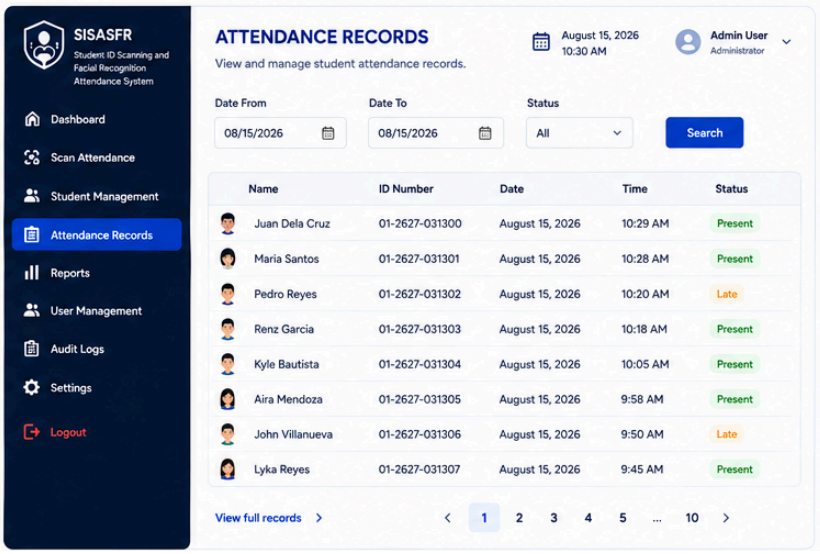

The project can benefit the entire school community by addressing common problems related to attendance recording, identity verification, and data management. It demonstrates how technology can be used to improve an existing school process and make it more efficient and reliable. By combining ID scanning, facial recognition, automated attendance recording, and secure data management, SISASFR can contribute to a more organized, accountable, and technology-driven school environment.
